
ANTI-SPALL COATING PX-2100

- PAXCON Spall Lining - PX-2100 is a spray applied coating that absorbs the impact from projectiles preventing both the projectile and the armoured plating from creating spall.

- The flexibility and absorption that LINE-X Spall Liner offers when applied to armoured panels eradicates the splintering effect by cushioning the impact and entrapping the fractured elements. PAXCON spall lining is currently being used on armoured vehicles in conjunction with Dyneema and similar armoured panels which is significantly lighter and more cost effective than armouring with steel plates.

Other Spall Liner applications include the coating of Breastplates and Gun Turrets. PAXCON Spall Liner is currently being used on both the strike side and reverse side of Dyneema, Ceramic and Armour Plated panels.

PAXCON PX-2100 is the only polyurethane material that has received certificated testing by H.P White Labs in accordance to STANAG 4569 III and NIJ III. The result from these tests showed that PX-2100 sprayed over armour plating at 6mm thick completely prevented every bullet fr...
